

Lightroom Classic 1

Cookeville Camera Club Workshop

Often, when we buy an application, we are in a hurry to get to its core functionality, with little thought about proper installation and setup.

Sometimes we don't even understand the decisions we are asked to make during this process. We press the "recommended" or "default" settings and move on. And it generally works. But... are there better options?

There are! And the correct setup may be different for everyone!

Building a Strong Lightroom Foundation

This is a foundational class for both new and current Lightroom Classic users. It is designed to provide the user with an understanding of what Lightroom is and how it works, providing you with the necessary knowledge to properly setup and maintain Lightroom for your use case. Camera Club members and the public are welcomed to attend.

Proper setup will greatly improve your Lightroom experience and the quality of the images you create.

Topics include:

Lightroom Overview

- What is Lightroom
- Workspace
- Lightroom Modules
